

## Silla para minusválidos DORADOS BLUONE

Grúa Piscina Dorados BLUONE está diseñado para transferir personas a y desde las piscinas, vestuarios y otros lugares de un modo sencillo, cómodo y seguro.

Grúa Piscina Dorados BLUONE es fácil de usar. La persona está sentada en el asiento frontal. Se acerca hasta el borde de la piscina y fijamos la palanca de seguridad, si no el aparato no funcionará. Empezamos a bajar el asiento apretando el botón de BAJAR.

Grúa Piscina Dorados BLUONE es un elevador de manejo muy sencillo. Elimina el estrés que sufren las personas discapacitadas con otros elevadores hidráulicos o eléctricos, sin correas ni ganchos. El trabajo del operador es suave y sencillo, evitando situaciones difíciles y peligrosas.

Grúa Piscina Dorados BLUONE es una silla que permite llevar a las personas desde cualquier parte de la instalación, como el vestuario, a cualquier punto del borde de cualquier piscina.

Grúa Piscina Dorados BLUONE ocupa un pequeño espacio en el almacén, (120x50x125 cm), una única silla sirve para cualquier piscina de la instalación.

Grúa Piscina Dorados BLUONE no necesita ningún tipo de instalación adicional en el edificio, ni tomas de agua, ni engorrosos anclajes en el pavimento y a diferencia de otras sillas no puede dañar el vaso o el pavimento durante su trasiego.

Grúa Piscina Dorados BLUONE es una aparato patentado internacionalmente, está aprobado por la CE y tiene una garantía de 24 meses.

### CARACTERÍSTICAS TÉCNICAS Grúa Piscina Dorados BLUONE

- Capacidad de elevación: 120 Kg
- Máximo desplazamiento del brazo: 1150 mm
- Tiempo para bajar una persona: 23 seg
- Tiempo para subir una persona: 17 seg
- Peso total: 120 Kg
- Estructura de acero estable y robusta
- Batería recargable de 24 V
- Cuadro eléctrico incorporado
- Carrete para cable de recarga
- Reposabrazos abatibles

Automatic supporting foot

Emergency push

Battery charging level gauge  
manual pump

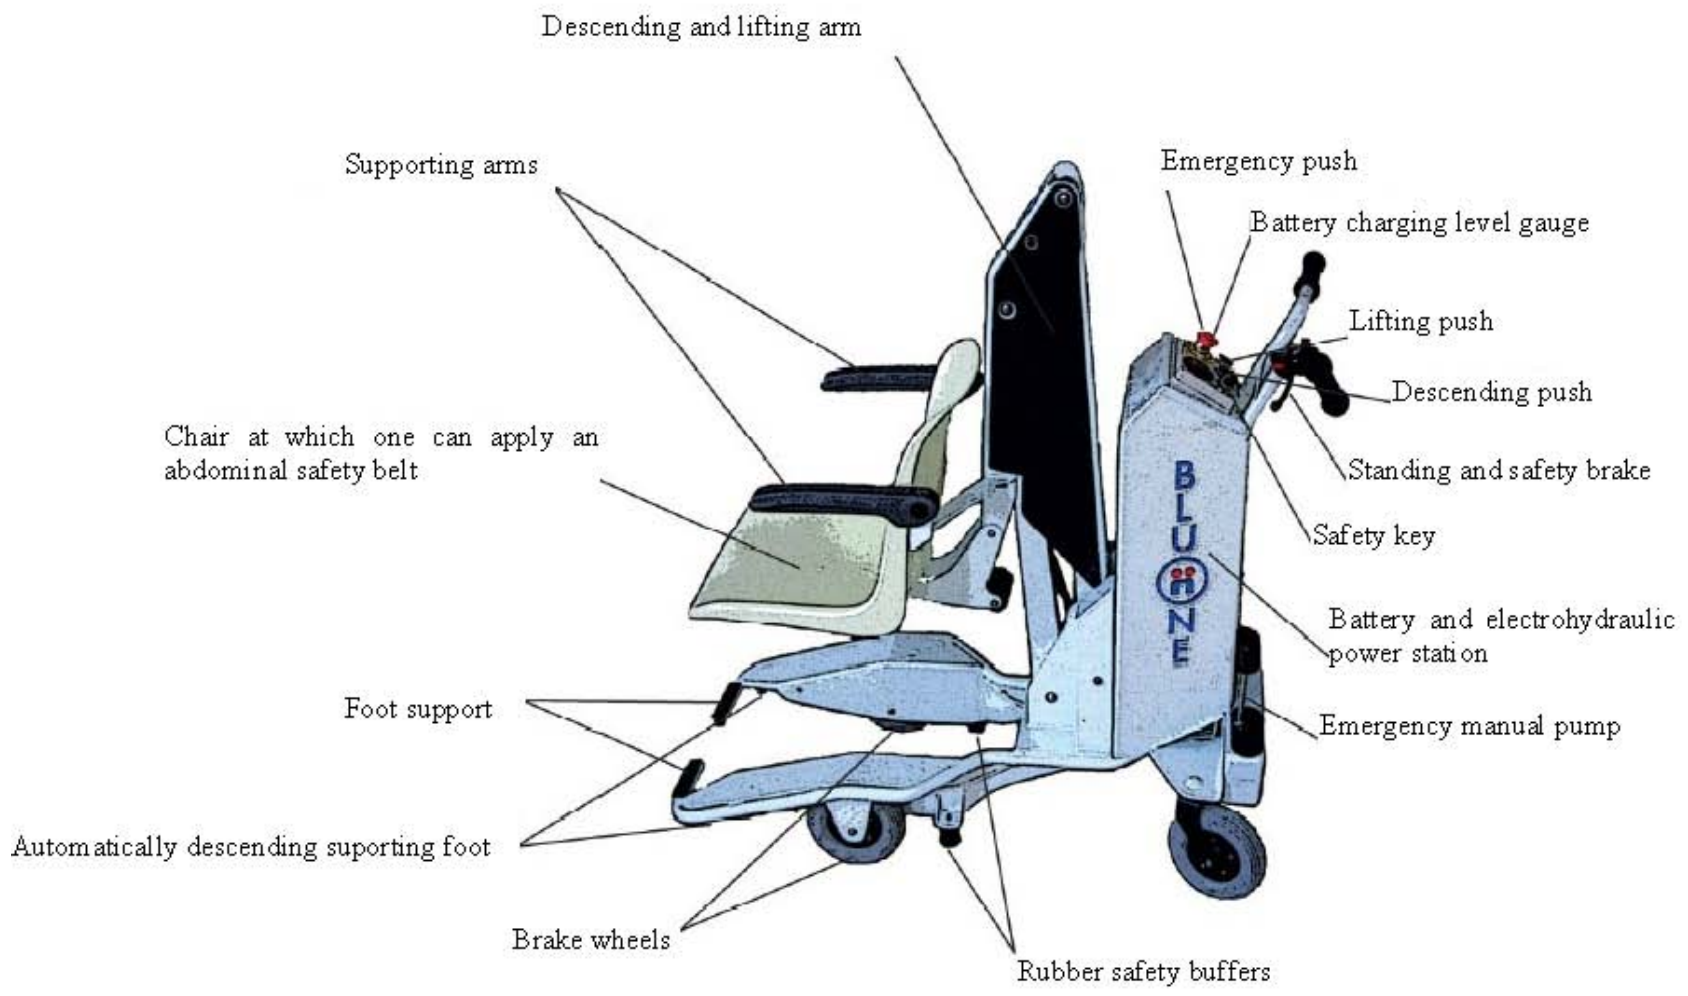

Safety buffers

Emergency

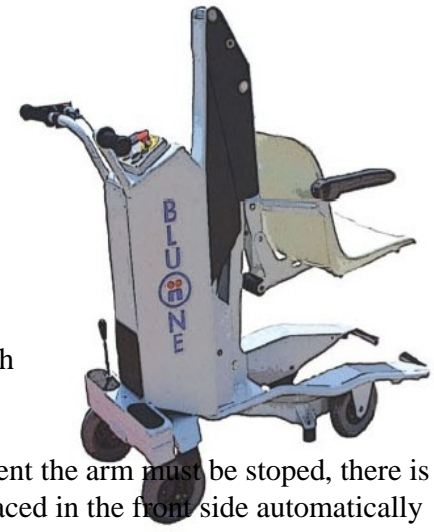

**What is Dorados BLUONE made of!**

### **What is Dorados BLUONE?**

There is an accessory permitting to persons with limited motor capacities the access to all types pools. Particularly practical and safe, there is supplied with five safety levels, it works with battery and in practice it doesn't need any special maintenance, being sufficient the battery recharging when there is requested by the gauge.

How does it work? Simply by putting the person on the previously placed chair, getting near to the pool edge, putting the accessory on the brake (if not braked, there will not work) and slowly descending the chair in the water, by pressing the push. In order to lift, one must proceed in the reverse order, the person being in the water must be put on the chair and lifted by pressing the lifting push in order to put in action the arm that slowly goes up, repositioning the chair behind the elevator arm, and the person is lead wherever he / she wants to; the chair could be supplied with abdominal safety belt. There is supplied with five safety levels:

- 1) Standing brake, if not braked the accessory cannot set in action the descending arm; 2) At any moment the arm must be stopped, there is sufficient to press the red push placed on the electric panel; 3) Whilst the arm goes down, two foats placed in the front side automatically lean upon the edge of the pool, avoiding this way the accessory's overturning before; 4) The accessory is supplied with emergency manual pump which are useful in the moment the batteries doesn't work any more, suddenly, the arm can be manually set in action, both for lifting and for descending it; 5) Between the anterior and the posterior wheels there are placed two rubber buffers in order to avoid the accessory's overturning in

case that one would come with the wheels too close to the edge of the pool. As very easy one could intuit, this accessory is particularly practical, comfortable and pleasantly to use, limiting the stress of the person who, having walking problems, there is constrained to bear unusual belts and helps the operators who in this way there are not constrained any more to execute strange, sometimes dangerous manoeuvres, in order to let to the persons to go down in the pool.

### **TECHNICAL CHARACTERISTICS**

Maximal capacity: 110 kg, Weight: 65 kg, Voltage: 12 Volts, Maximal movement: 120 cm, Battery: 24 Volts; Structure from steel treated through cataphoresis, sprayed with powders; The electrohydraulic power station, Battery charger, Cable protection for battery charger, Battery charging level gauge.

The accessory is patented and homologated CE, having a warranty of 2 years.
